B-Design3D provides for more than 25 years highly realistic 3D, interactive visual databases. Our focus is transportation system; driving simulation, for autonomous and semi-autonomous vehicles, full City 3D models, and the integration of sensors (FLIR, LIDAR, Radar, Image Sensors, RFID, NVG). Its newly patent application on " SYSTEMS AND METHODS FOR IMPROVING THE DETECTION OF LOW-ELECTROMAGNETIC PROFILE OBJECTS BY VEHICLES" (European # 19860983.6.) opens a new dimension in transportation safety for the emerging autonomous-transportation market.

Our Visual Databases and 3D content creation services are supplied to leading companies and government organizations around the world, mainly in the simulation industry. As one example, see

https://www.youtube.com/watch?v=UoPXzzK_g1Q&ab_channel=NVIDIA

We seek to be partners for projects addressing the calls - CL5-2021-D6-01-XX by providing our highly realistic 3D for simulation, testing, and training and integrating our novel, patent-pending, technology.
