

## **Our Company**

Aerocircular is a young Belgium-based SME, introducing the Circular Economy in the sector of end-of-life aircraft decommissioning. We are based at the International Airport of Ostend-Bruges (Belgium), and are developing sites in the US and the Middle-East. As a Preferred Partner of Lufthansa for all aircraft dismantling programs, the company is rapidly growing. Aerocircular offers both aircraft dismantling in Ostend-Bruges Airport, but also at remote locations when airframes are no longer airworthy.

## **Expertise**

Aerocircular has extensive experience in aircraft decommissioning, both on-site and on remote locations. Pushing boundaries to raise the bar for sustainable aircraft dismantling, we use our circular economy experience, materials expertise and aircraft design know-how to realize higher financial and societal value for each EoL aircraft processed by co-development of new refurbished products, new recycle materials, industry 4.0 processing and improved recycling. We have established a multi-national partner network to tackle this societal challenge with us, and are well experienced with EU Horizon 2020 funding programs.

We are looking for an impactful consortium to join and offer our expertise and ideas with respect to sustainable aircraft decommissioning, as explicitly referenced in the call text.
